

Model SW 630

Description: cored wire that produces a chrome casting deposit that is very resistant to abrasion and with a moderate resistance to impacts, suitable for replacing parts worn by earth, sand and abrasives. The deposit cracks when cold and is not machineable.

Applications: dredging pumps, mixers, sifting plates, buckets mixers and kneading machines, hoppers, grillers, filters and digger scoops.

Features:

- Hardness: 61 Hrc (after three turns).
