

Model SW MMV

Description: epoxy resin that can be kneaded by hand and for permanent repairs in humid, damp and underwater areas (salt or freshwater). Sticks firmly to glass fibre, metal, wood, concrete, ceramic, glass, etc. The treatment time depends on the temperature of the water and is affected by the atmospheric temperature on applications not underwater. Changes from aquamarine to white fibreglass when treatment and does not become yellow when exposed to UV rays.

Applications: patches on dents, scratches, cuts, holes in hulls on boats made of fibreglass, metal and wood. Switches, pipes, electrical connections, seals losing water, petrol tanks, water tanks, fish tanks, containers for batteries, sinks, washbasins hot water pipes, pools, etc... Ideal for emergency repair work under water.
